LuK RepSet with modified clutch disc

Manufacturer: BMW

LuK RepSet: 624 3530 00

For improved driving comfort, the clutch discs for various models of the motor vehicle manufacturer listed above have been modified. This change was introduced at the factory during the production period. As a result, identical models can, depending on the date of manufacture, be equipped with different clutch discs.

Effective immediately, the LuK RepSet kits listed here will include the modified clutch disc. In this way, the benefits of the new system can also be applied to models which had been equipped with the standard arrangement.

The most striking difference in the clutch discs is the diameter. In the current variant it is 228mm (Fig. 1), and in the previous one it was 240mm (Fig. 2). In addition, the hub design has been changed.

The clutch disc of the LuK RepSet meets all technical specifications and can be used without restriction in combination with new flywheels or with ones already in use.

Fig. 1: Clutch disc of the LuK RepSet (diameter 228mm)

Fig. 2: Original equipment clutch disc (diameter 240mm)

Please observe the vehicle manufacturer specifications!
