Booster Clutch

for motorcycles

SCHAEFFLER

Booster Clutch for Motorcycles

Description

- Self-reinforcing multi-disk clutch with ball ramps

Features

- Diaphragm spring design with self-reinforcing function using ball ramps
- Very high torque capacity
- Lightweight construction made from formed sheet steel parts
- Integrated damping system
- Steel friction plates
- Steel/steel contact

Product benefits

- Reduced actuation force increases riding comfort
- Increased ride safety due to limitation of driving torque (anti-hopping function)
- Comfortable actuation force curve
- Constant release load throughout the operating life
- High thermal load strength

Integration/installation

- In both single and multi-disk clutches
