

Timing Belt KITS

Intelligently assembled – all accessories required for installation are included

BRILLIANT

Brilliant: Timing Belt KITS from INA.

Increased loads and stronger vibrations alongside higher expectations of service life: The timing drive must keep up with ever-increasing demands. To effectively avoid engine damage and consequential costs, it is recommended to regularly replace all components of the belt drive according to the manufacturer's specifications.

INA KITS – high-quality and fully equipped.

INA has put together intelligent KITS to ensure that replacement is especially simple and efficient. In addition to the Timing Belt and the tensioner, deflection and guide pulleys, the KITS contain all of the accessories required for the repair – from screws and nuts to bolts and gaskets. Of course, everything comes in proven INA OEM-quality.

Timing Belt KIT

Timing Belt KIT with water Pump

Also included: the water pump.

As the fitted water pumps are also frequently affected by wear, more than 230 KITS from INA's wide range of over 750 Timing Belt KITS include a water pump. For engines where the thermostat is fitted directly onto the housing of the water pump and therefore a subsequent replacement would require the Timing Belt to be removed again, INA offers special KITS that include a thermostat.

This means that you are optimally equipped for nearly all European and Asian vehicles and makes INA the first choice for your Timing Belt repair.

The advantages:

- Complete package with all of the accessories required for repair
- Tailor-made for nearly all European and Asian vehicle models
- Ensures that the timing drive continues to function in the long term
