

ZERO TOLERANCE.

INA Camshaft KITS:

The highest level of precision from
the original-equipment manufacturer

SCHAEFFLER

FAG

 **RUVILLE**

Leading the way in original equipment.

With more than 450 million parts produced annually, INA is the leading manufacturer of all types of valve train components and a reliable partner to the automotive industry.

As a technology leader, our focus is on ensuring the highest level of precision in production and assembly.

Quality begins with INA.

The loads on components in the valve train are enormous. Under increasing pressure and extreme temperature differences, they must guarantee that intake and exhaust channels open and close precisely.

Our first-class components have been created just for this type of application, as they

- combine to offer high wear resistance
- work frictionless
- guarantee optimal heat dissipation

The product portfolio for professional repair.

With its comprehensive range of individual parts and repair solutions, INA is also ideally positioned in the automotive aftermarket, allowing valve trains to be repaired efficiently.

Unpack, install, and you're done.

For perfect, stress-free installation: our INA Camshaft KITS. Delivered as an all-in-one package with the usual original-equipment quality. Includes everything required for a quick and professional repair:

- camshaft(s)
- tappets/pivot elements or rocker arms/finger follower
- all accessories, e.g. sealing rings, screws and running-in oil

What this means for you: no time-consuming research for individual parts and perfectly matched components for optimal functionality.

This is manufacturing precision.

Our valve train components are manufactured to the highest levels of precision. Our promise: Manufacturing tolerances of ± 0.01 mm or less. For comparison, this is about $1/8$ of the diameter of a human hair. It doesn't get any more accurate!

The perfect combination of materials.

There isn't just one material used in a camshaft kit – but there are intelligent material combinations that perfectly complement each other. It all depends on the synergy of camshaft material and the type of counterpart!

Our INA Camshaft KITS facilitate perfect material combinations, ensuring

- smooth engine operation
- 100% engine power
- low wear

A clear decision.

For intelligent, convenient and efficient repair in original-equipment quality: **Camshaft KITS from INA.**

You benefit from satisfied customers, noticeable time savings and smooth installation.
