Torque Converter with Centrifugal Pendulum-type Absorber
**Torque Converter with Centrifugal Pendulum-type Absorber (CPA)**

**Description**
- High-performance torque converter with best possible order-dependent isolation of vibrations by means of CPA

**Functional advantages**
- Highly efficient hydromechanical torque converter fluid circuit
- Innovative riveting process eliminates the requirement for a cover drive disk
- Near perfect isolation of vibrations because the CPA is adjusted to an order of excitation and not to a specific frequency like conventional dampers

**Product benefits**
- Low fuel consumption
- Reduction of CO₂ emissions
