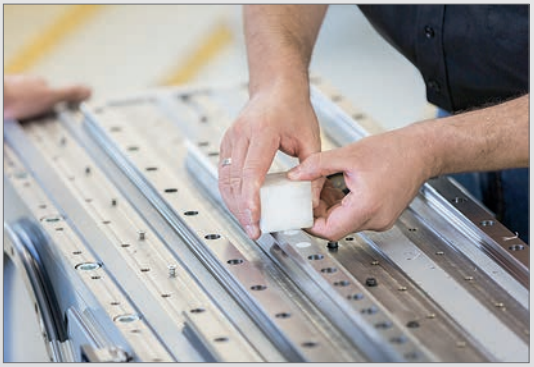
Training Course

Mounting of linear technology

SCHAEFFLER

SERVICES

Training course on mounting linear technology



Professional mounting largely determines the operating life of linear guidance systems.

The mounting courses on linear technology demonstrate professional mounting and dismounting of linear technology and the use of the necessary auxiliary tools based on various examples.

Participants will be given the opportunity to practice mounting and aligning of linear guiding systems under professional supervision from our experts.

In addition to the practical training units, the implementation of mounting specifications and the relevant diagrams and tables will be covered.

- Attendance of the product training course on linear technology is a prerequisite for the mounting courses on linear technology.

Content

- Knowledge of tools and auxiliary tools for mounting and dismounting linear guidance systems
- Professional, careful, and cost-effective mounting and dismounting of linear guidance systems using the relevant tools in practice
- Alignment of linear guidance systems
- Observance of precautionary measures and accident prevention regulations for mounting and dismounting linear guidance systems

Customer benefits

- Awareness building and qualification of your employees regarding the safe handling of linear guidance systems
- Correct mounting and dismounting
- Use of professional tools
- Use of our expert knowledge
- Practical training opportunities
- Longer operating life and increased performance
- Higher machine availability
- Reduced maintenance work

Target group

- Engineers and technicians
- Commercial personnel in technical sales
